Young Forum

Who are we?

01

02

What do we want?

It is our aim to combine young creativity and artistic ambition with medical science - because medicine, art and culture are closely related.
Furthermore we want to encourage an ethical, health policy and social discourse - especially amongst young people and students in order to implement art and culture into the medical education.

We want to

- strengthen mutual relations between artistic, socio-cultural and medical study courses and to create a network between (inter)national students.
- promote young creativity, dynamics and interdisciplinarity in a meaningful way also using contemporary media
- build a bridge between the EUKMK and students/young people interested in culture and medicine to incorporate young spirit into the gild and to enable future growth.

Time for questions and ideas
